2015 BOULDER COUNTY ISSUES SURVEY

Hello, my name is _____. First, I want to assure you that we're not selling anything, or asking for money. I'm with Talmey-Drake Research, a public opinion research company here in Boulder, Colorado. We are conducting an interesting survey with registered voters about local issues in your community, and we would like to include your opinions. Your telephone number was selected purely at random.

- Programs to conserve our water resources by helping farmers, residents and businesses reduce their water use;
- Expanded recycling and composting services and facilities for Boulder County residents and business owners to help reduce waste;
- Assistance to local farmers to grow more local and organic food for Boulder County residents;
- Energy efficiency and renewable energy services such as EnergySmart programs for homes and businesses and home weatherization for low-income households;
- Increased transportation options by providing more bus shelters, bike paths, bike lanes, and sidewalk connections to improve transportation choices and safety.

The current open space tax will expire in 2019 unless voters approve this extension. If the election were held today, would you vote in favor or against renewing the Boulder County Open Space tax and using some funds raised by the tax for county sustainability programs?

Methodology

2015 Boulder County Ballot Issues Survey was conducted on behalf of the Boulder County by Talmey-Drake Research & Strategy, Inc., a public opinion research firm in Boulder, Colorado. The results of this survey are based upon 605 telephone interviews conducted among active voters residing in Boulder County. Drake Research purchased a random sample of telephone numbers, and a supplemental list of cell phone numbers, of active County registered voters, which was then randomly sampled. Quotas were established to obtain appropriate representation for gender, geography, and political party. Interviews were conducted from December 3 to 13, 2015. A random sample of 605 has a worst-case 95% confidence interval of plus or minus 4.0% about any one reported percentage.
